

NeuroScience Quality Management System

Consistent products, consistent results

Scientific Research

We formulate based on published scientific journals and clinical studies that discuss safe and effective ingredients as well as the amount necessary for positive outcomes.

Ingredients

We audit our manufacturers to ensure ingredients meet our specifications for purity and strength.

Manufacturers

We use FDA-inspected facilities located in the United States that are cGMP (Current Good Manufacturing Practices) compliant and NSF accredited.

Finished Product Testing

We contract laboratories to independently verify the purity, strength, and composition as well as test for microbiological, heavy metal, and chemical contaminants.
